

This guide intends not to delve into macro making but instructing you in how to transfer over the macros in the repository to your character sheet so you can take advantage of them even if you don't know or want to know how to make macros.

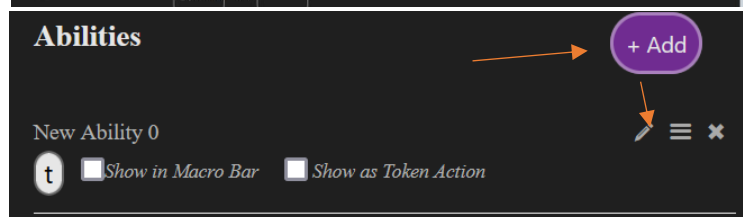

**Step 1.** Open the repository macro you wish to add to your sheet and copy the code. In this example we'll be copying over the Healer macro that quickly and easily calculate the healing from the Healer feat.

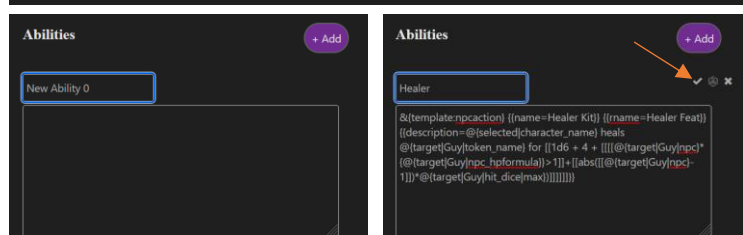

**Step 2.** Open your character sheet and go to the “Attributes & Abilities” tab

**Step 3.** Click the “+ Add” button in “Abilities”, hover over the right of the name and hit the pencil icon to edit the ability.

**Step 4.** Name your ability in the top box and paste the code in the bottom box. We'll call our ability “Healer”. Once you're done click the checkmark to save the changes.

**Step 5.** Now that you have your macro you can run it at any time by clicking the button under the name. However you might like to have quick and easy access to it without having to go back and forth to the “Attributes & Abilities” tab. In which case you can tick the “Show as Token Action” box. Now when you select your token, that macro will be available in the top left corner of the screen.
